This action is responsive to the decision made by the Board of Appeals and Interferences mailed on June 5, 2011. Claims 1-10 are pending. The prosecution of this application is re-opened.

Allowable Subject Matter

In accordance with the decision made by the Board of Patent Appeals and Interferences, claims 1-9 are allowed.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 10 lacks the necessary physical articles or objects to constitute a machine or a manufacture within the meaning of 35 USC 101. They are clearly not a series of steps or acts to be a process nor are they a combination of chemical compounds to be a composition of matter. As such, they fail to fall within a statutory category. They are, at best, functional descriptive material *per se*.

Descriptive material can be characterized as either "functional descriptive material" or "nonfunctional descriptive material." Both types of "descriptive material" are nonstatutory when claimed as descriptive material *per se*, 33 F.3d at 1360, 31 USPQ2d at 1759. When functional descriptive material is recorded on some computer-readable medium, it becomes structurally and functionally interrelated to the medium and will be statutory in

most cases since use of technology permits the function of the descriptive material to be realized. Compare *In re Lowry*, 32 F.3d 1579, 1583-84, 32 USPQ2d 1031, 1035 (Fed. Cir. 1994). According to the applicants' specification as filed, the content is disclosed as both **functional and non-functional descriptive material**. The content is disclosed as "**energy pattern** traveling via a physical medium, e.g. **air**, a set of conductors, or a guide for electromagnetic energy such as an optical fiber or a waveguide. **The content may alternatively be stored on a carrier and distributed by distribution of the carrier**. Examples are mass-storage media, e.g. an optical disc such as CD, DVD, HD-DVD, or Blu-Ray" (Applicants' specification, page 2, line 32 to page 3, line 2). Also, the receiver is disclosed as "decoder/encoder or **signaling stack**" (the specification page 3, line 30).

Merely claiming transitory nonfunctional descriptive material, i.e., abstract ideas, stored on a computer-readable medium, in a computer, or on an **electromagnetic carrier** signal, does not make it statutory. See *Diehr*, 450 U.S. at 185-86, 209 USPQ at 8 (noting that the claims for an algorithm in *Benson* were unpatentable as abstract ideas because "[t]he sole practical application of the algorithm was in connection with the programming of a general purpose computer.").

As per claim 10, "a computer program product enabling....." is directed to transitory computer program product. Therefore, claim 10 is directed to transitory components of a computer program (or 'program product') and not to a computer implemented process or apparatus.

Non-statutory subject matter cannot be automatically converted into statutory matter merely by broadly labeling the claim as "A computer program product enabling....", or by drafting the claims with token references to something that is statutory subject matter. This form of draftsmanship would amount to elevating form over substance.
